Preparing Data Sources for DVD

Input media requirements for DVD 5 and DVD 10

- DLT 4000/8000 – the recording must be made in the DVD format - Universal Tape format (DDP version 2.00, 2.10)
- DVD-R (Authoring or General) – the recording must be made using DAO (disc at once)
- Pressed DVD 5, DVD 9 or DVD 10 (as applies) must have no copy-protection mechanism, e.g. CSS (Content Scrambling System)

Input media requirements for DVD 9

For each layer, supply a separate medium identified Layer 0 / Layer 1

- DLT 4000/8000 – the recording must be made in the DVD format - Universal Tape format (DDP version 2.00, 2.10)
- Pressed DVD 9 must have no copy-protection mechanism, e.g. CSS (Content Scrambling System)

GZ Digital Media prefers that sources be submitted on DLT tape. If you submit material on a pressed DVD or on DVD-R, please send the material in two copies in order to minimise the risk of delays that could occur in case of media failure, in which case the material would need to be sent again.

Recommendations
- use media from a major brand
- supply media in their original cover
